Portfolio, *GitHub*, *Lattes*

PROFILE

Front-end developer with 5+ years of React, TypeScript and Next.js, currently senior at HostGator, with an M.Sc. in Informatics from UFAM. I build product interfaces with design systems, accessibility and tests, and I measure performance: on my portfolio, I cut initial JavaScript by 27% and brought LCP from 1.25 s to 0.18 s. I founded and run CurrículoRaiz, a resume SaaS, in production. I use AI with a process: spec before code (OpenSpec), Claude Code, tests and review.

PROFESSIONAL EXPERIENCE

Senior Front-end Developer, HostGator Oct 2025 — Present

Florianópolis, Brazil (remote)

- Build and maintain web apps for the activation, innovation and AI agents teams and contribute to the front-end architecture.
- Built Customer Dashboard screens (metrics, hosting management and support) in React with Redux Saga, design system components and tests with Jest and React Testing Library.
- Worked on the shopping cart for hosting products and services, focused on conversion and a smooth checkout.
- Lead technical refinement and dailies, and follow each delivery through to production deploy and pipeline management.

Mid-level Front-end Developer, O2 Filmes (Teksto) Sep 2024 — Dec 2025

São Paulo, Brazil (remote)

- Built scalable React and TypeScript components for Teksto, a SaaS for screenwriters, with a ProseMirror editor and Radix UI.
- Structured state flows with Redux and Redux Saga and integrated REST and GraphQL APIs.
- Shipped features iteratively, with code review across the team.

Mid-level Front-end Developer, Atem Distribuidora de Petróleo May 2022 — May 2025

Manaus, Brazil (hybrid)

- Led the React front end of the Procurement Portal.
- With the team, built in React, React Native and TypeScript the Customer Portal (invoices, order history and AWS authentication), Atem Finance, REAM (Manaus Refinery) and the PoshCash cashback app.
- Contributed to the products' component libraries and CI/CD automation.

Junior Software Developer, Sidia Institute of Science and Technology Apr 2021 — May 2022

Manaus, Brazil

- Built dashboards in React, Next.js and TypeScript with real-time smartwatch tracking.
- Took part in proofs of concept and in educational and corporate products, such as the HeyTeam dashboard.

Graduate Research Fellow (CAPES), iComp, UFAM Mar 2019 — Mar 2022

Manaus, Brazil

- Created UpRobotics, a web tool built on Google Blockly to program robotic arms and other 3D robots, generating code for Arduino UNO and simulations in Webots.

PROJECTS

CurrículoRaiz (curriculoraiz.com) — Founder & Developer · May 2026 – present

- Built the product end to end: React 19 and TypeScript editor (Tiptap, TanStack Query) and a Node.js, Express, Prisma and PostgreSQL API, with 9 templates, PDF (Puppeteer) and Word export that mirrors the PDF, LinkedIn import and a pt/en/es UI.
- Sized PDF generation from measurements (about 4 s per file): one render per instance and a bounded queue (20 requests or 45 s, then 503 with Retry-After), on Cloud Run with up to 4 instances; front end on Vercel, database on Neon.
- Integrated Mercado Pago with Pix, cards and coupons, with HMAC-SHA256-verified payment notifications.
- Pre-rendered the public pages with hydration and SEO checks at build time, and added Lighthouse CI to the pipeline with budgets of LCP ≤ 2.5 s, CLS ≤ 0.1, accessibility ≥ 95 and SEO 100.
- Implemented GrowthBook feature flags, an admin panel with funnel metrics and audit trail, security headers and 60 test files, one of which renders every template’s real PDF to check ATS readability.
- Develop with AI and a process: every non-trivial change starts as an OpenSpec spec before any code (110 so far), implemented with Claude Code and reviewed through tests; I also use graphify and Pencil.

Personal portfolio (Next.js 16, React 19, Tailwind 4)

Server-rendered content and CSS animations: 27% less initial JavaScript (308 → 224 kB gzip), blocking time from 200 to about 70 ms and observed LCP from 1.25 s to 0.18 s, with AA accessibility tested in the browser.

EDUCATION

Federal University of Amazonas (UFAM) Mar 2019 — Mar 2022

M.Sc. in Informatics *Manaus, Brazil*

Dissertation papers at SBIE 2022 and SBESC 2020 on educational robotics with block-based visual programming (UpRobotics).

Federal University of Amazonas (UFAM) Nov 2013 — Jan 2019

B.Sc. in Software Engineering *Itacoatiara, Brazil*

Federal Institute of Amazonas (IFAM) Mar 2010 — Dec 2012

IT Technician (integrated with high school) *Parintins, Brazil*

SKILLS

Front end: React, Next.js, React Native, TypeScript, Tailwind CSS, Angular, Three.js

Back end and infrastructure: Node.js, Express, Prisma, PostgreSQL (Neon), Docker, Google Cloud Run, Vercel, AWS, GitHub Actions

Quality: Jest, React Testing Library, Vitest, Cypress, Playwright, Lighthouse CI, WCAG

State and design systems: Redux and Redux Saga, Zustand, TanStack Query, Storybook, Figma, Design System

Product and integrations: REST and GraphQL, Mercado Pago (Pix), Google Sign-In, GrowthBook, Puppeteer

AI-assisted development: Claude Code, OpenSpec, graphify, Pencil

LANGUAGES

Portuguese Native (C2)

English Fluent (C1)
